

Get your business processes under **control** with **Enfotek Process Plan Module!**

Enfotek ERP and Software Solutions Process Planning Module provides many conveniences for professional ERP users in managing business processes.

- You can plan the business processes step by step based on variants, country, termin, etc.
- You can ensure the automatic calculation of target time and deadlines for each business step, as well as the early detection and resolution of possible delays.
- You can make pre-determinations for constraints regarding the processes.
- You can send automatic notifications of target deadlines to process responsables and easily track the process.
- You can generate instant and reliable reports on compliance performance, process delay analysis, process performance, and process cost ratios.
- You can enhance business productivity based on resources and processes.

BENEFITS OF PROCESS PLANNING

Enfotek

PROCESS PLAN

You can create process plans consisting of different processes according to the **specifications** of the product and order.

You can determine different working hours and **schedules** for each process step.

You can **easily** define holidays such as national and religious holidays on the calendar. ┘

PROCESS PLANNING FEATURES

EASY VISIBILITY

You can postpone your process plans to a **later date**.

You can define the beginnings of successive processes according to the fulfillment conditions of the precursor processes.

You can ensure the automatic revision of the starting dates of successive processes based on the **completion** status of the completed work processes.

It allows transferring the dates of the automatic execution of the accomplished business processes onto the process plan.

ENFOTEK ERP AND SOFTWARE SOLUTIONS PROCESS PLANNING MODULE

The process management can be used for the process management of customer order steps, the process management of sample-prototype productions, and the process management of corporate development projects.
